

This project is presented by the Russian foundation  
«Science for Life Extension»

Currently, there are a number of good ideas, hypothesis and experiments focused on defeating aging. But it is not likely that separately they will lead to tangible success. It is essential to combine efforts in the frame of an united complex research program.

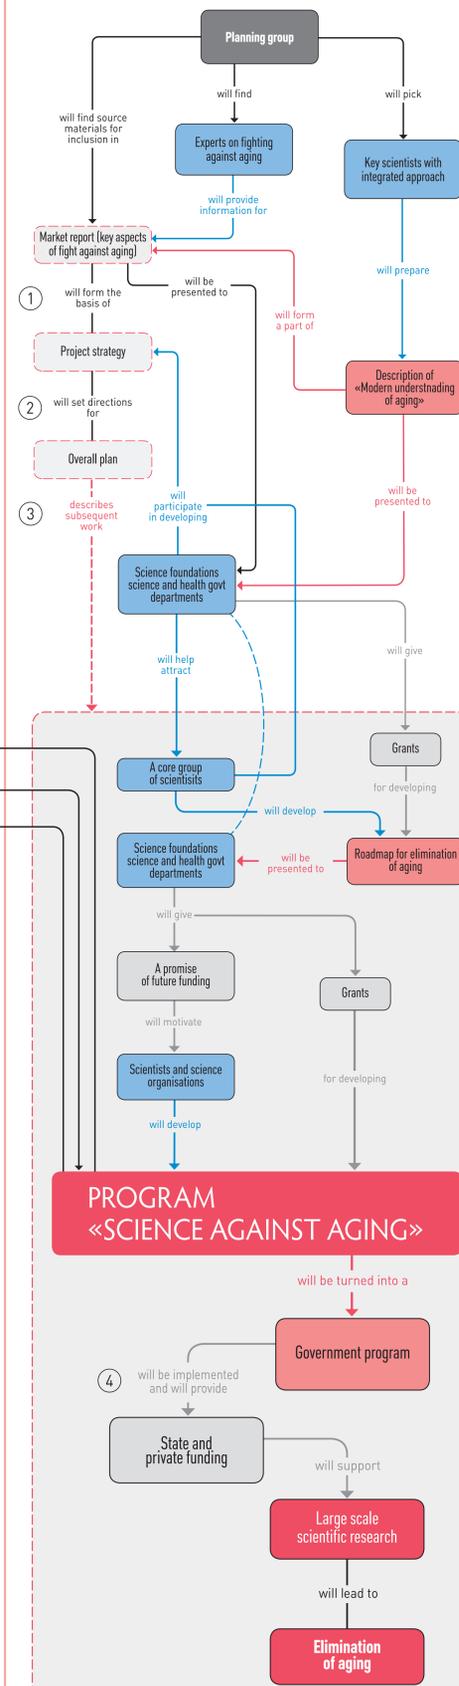

The foundation welcomes researchers, scientific coordinators, social scientists, government representatives and anybody interested in life extension to take part in the global initiative «Science Against Aging».

## DEVELOPMENT OF THE KEY ASPECTS OF THE FIGHT AGAINST AGING

## AGING ELIMINATION PLAN

## FUNDAMENTAL MECHANISMS OF AGING AND STRESS RESISTANCE

We propose the combination of efforts to define all the biological interconnections of the aging processes, stress resistance mechanisms and oncogenesis an evolutionary-comparative aspect.

- Project implementation stages**
- Iterations of the scientific program, from basic to final ones.
  - Funding stages.
  - Project participants.
  - Project planning.
- Major project milestones are listed below and marked with numbers on the diagram.
